

## Create PostgreSQL Connector DataSet ?

Domo works seamlessly with PostgreSQL's open source object-relational database system. You can use Domo's PostgreSQL Connector to pull data from your PostgreSQL database and compile custom reports. With an intuitive platform that brings all your data-and all your people-together in one place, it's easy to collaborate around real-time business insights and move forward with a single version of the truth. You can easily combine your PostgreSQL data with data from numerous other systems, allowing you to transform your data and make it all available for user self-service. See the metrics you need on any device, automate your reporting, and get alerts when there are important changes to your business.
