# Single Sign-On (SSO)

Managing passwords and manually updating profiles can now be a thing of the past with Single Sign-On (SSO).

**No extra password required to access Domo**  
People signed into your corporate IdP can access Domo without entering another password.

**Keep profiles synced**  
More than a dozen attributes can be updated with each login.

**Tighter security**  
All accounts and groups can be managed by your IdP.

**Flexibility**  
Your contractors in Domo might not be in your corporate directory. SSO includes an exception list, so all your people can still access your data.
