# Documentation

Leverage Domo's open cloud platform to build custom solutions to modernize any business process.

### Get Data into or out of Domo

[Data Connectivity](#)

### Administer or Customize Domo

[Enterprise Integration](#)

### Build an App on the Domo Platform

[Build Apps](#)

### Embed Domo into Your Website, Portal or Product

[Embedded Analytics](#)

Connect, process, and access data at scale seamlessly and dynamically using Domo's flexible open data platform.

### Popular use cases

#### Pre-built Connectors

See what's available now in the Domo Appstore

[No code](#)

#### Build Your Own Connector

Use Domo's Connector Dev Studio IDE to build your own custom connectors.

[Custom code](#)

#### Build Domo Actions

Leverage Domo to writeback only a specific item to source systems, like updating a lead in Salesforce from your Domo App.

[Custom code](#)

#### Build Domo API Actions

Build an automated action to trigger events across business systems.

[Custom code](#)

#### Build your own Writeback Connector

Push data from Domo to third-party file storage applications and systems

[Custom code](#)

#### API Data Connection

Import and export data and limit data access by specific users or groups using Domo APIs.
